FDA catalyses the conversion of triosephosphate into fructose-1,6 catalyses the conversion of triosephosphate in plant chlorophates (starch synthesis) and in the cytosol (sucrose synthesis). The recombinant DNA vector of the invention is useful for producing genetically transformed plants that have elevated carbon assimilation, storage, export and improved uniformity of solids (e.g. in transgenic potatose expressing fda). The vector of the invention is particularly useful in the commercial production of foods derived from 1 potatos which are useful for producing French fries. The transgenic plants exhibit increased photosynthesis rate, increased plant yield, increased growth rate and increased solids uniformity compared with the recombinant DNA vector. The recombinant DNA vector provides higher quality, more uniform potato tuber regions, and therefore french fries. This results in a higher throughput in the Erench fries this results in a higher throughput in the creates any processing plant due to lower processing times, and processor cost savings due to lower energy input required for lower blanch, dry, and par-fry times. The present sequence represents a plant transformation cortaining the E. coli fda gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2238

The invention relates to a new polynucleotide comprising (i) a nucleotide sequence encoding a mutant plant ethylene receptor protein, or its sequence encoding a mutant plant ethylene receptor protein, or its cargament, which exhibits ethylene insensitivity, and (ii) a regulatory nucleotide sequence promotes transcription mucleotide sequence promotes transcription of the protein encoding nucleotide sequence in cells that comprises abscission zone tissue of a plant. Also included are a cell transformed with the polynucleotide, a plant, plant tissue, or a plant cell transformed with nor bred to contain the polynucleotide and a method for decreasing flower, fruit, or leaf drop in a plant upon exposure to cethylene, comprises introducing the polynucleotide into a plant. The polynucleotide preferably comprises a nucleotide sequence encoding a cells mutant receptors). The regulatory nucleotide sequence comprises or ein4 mutant receptors). The regulatory nucleotide sequence comprises a comprise contain the polynucleotide sequence comprises a contain the polynucleotide, protein, and method are useful in decreasing mutant ethylene receptors present sequence represents plasmid plasmid plasmid plasmid method are useful in decreasing mutant ethylene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New polynucleotide encoding a mutant plant ethylene receptor protein, useful in decreasing flower, fruit, or leaf drop in a plant upon exposure
                                                                                                                             Cotton; ethylene receptor; ds; ethylene insensitivity; abscission zone tissue; plant; transgenic; flower drop; fruit drop; leaf drop; EIN; ethylene insensitive; EIL; ethylene insensitive; lik; chitinase; cellulase; polygalacturonase; pLBS107; cyclic; circular.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 11606 BP; 3014 A; 2696 C; 2782 G; 3113 T; 0 U; 1 Other;

```
translationally through the conversion of a conserved lysine residue by DHS. Also claimed are eIF-5A and DHS expression vectors for plant transformation and methods for modulating (inhibiting or increasing) eIF-5A or DHS expression in a plant. Inhibiting expression confers an increased resistance to virulent damage arising from pathogen ingression as compared to wild type plants. The methods and compositions of the particular for modulating (increasing/up-regular protein synthesis, in particular for modulating (increasing/up-regulating or inhibiting) the expression of eIF-5A and/or DHS, and for producing transgenic plants with modulated senescence, wounding and growth. The present sequence was used
                                                                                                                                                                                                                                                                               GGCAACAAATATATTTTCAGACCTAGAAAAGCTGCAAATGTTACTGAATACAAGTATGTC 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to eukaryotic initiation Factor 5A (eIF-5A) and deoxyhypusine synthase (DHS) sequences. eIF-5A is an essential protein factor which is involved in the initiation of eukaryotic cellular protein synthesis. It is characterised by the presence of hypusine [N-(4-amino-2-hydroxybuty1)lysine], which is formed on eIF-5A post-

The present sequence is that of luciferase expression vector ACT-OM-LUC comprising an expression construct composed of an actin 2 regulatory element comprising an enhancer and promoter, a tobacco mesaic virus omega translational enhancer, a nuclectide sequence encoding luciferase, and an RbcS E9 polyA region. Claimed vectors, including ACT-OM-LUC, can be used to transform a plant cell such that the cell expresses luciferase in an amount sufficient to produce at least 750,000 photons of visible light/sq mm/second. Also claimed are visibly bioluminescent transgenic plants that contain the genetically modified plant cell. The transgenic plant may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel genetically modified plant cell, useful as research tool, comprises a heterologous nucleotide sequence encoding a bioluminescent polypeptide expressed in an amount sufficient to produce visible light.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 GCCAACAAATATTTTCAGACCTAGAAAAGCTGCAAATGTTACTGAATACAAGTATGTC 120

                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is the nucleotide sequence of an expression cassette in PKYLX7135S2. The promoter in this plasmid is a 35S promoter modified by a duplicated enhancer region. The invention provides a means for producing virus resistance in tomato and other crops to infection by tomato yellow leaf curl virus-Israel (TYLCV-Is). A claimed method of providing resistance in a plant involves transforming the plant with a polynucleotide comprising a fragment of a TYLCV Rep gene, a polynucleotide antisense to the truncated Rep gene, or a polynucleotide truncated Rep gene or antisense sequence. The plant is selected from statice, petunia, lisianthus, tomatillo, and especially tomato or tobacco, and transformation is performed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1703 TGACCGAAGTTAATATGAGGAGTAAAACACTTGTAGTTGTACCATTATGCTTATTCACTA 1762

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Genomic sequence was searched against NCBI NonRedundant Protein database

with BlansTP. BSTS represent the identified cDNA sequences using

BLASTN with the corresponding DDBJ accession no. and RGP clone ID.

Pull-length cDNAs represent the identified cDNA sequences using

BLASTN with the corresponding DDBJ accession no.

```

```
A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and 'like protein'. A gene without significant homology to any protein but with full-length cDN or sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard. A gene prediction program is classified as a probable 'hypothetical' protein and is included as a probable 'hypothetical' protein and is included as a miscellaneous feature of the sequence.
                                                                                                                                                                                                                                                                                                                                            The orientation of the sequence is from M13rev to -21M13 of the BAC clone. This sequence of B1051B10 clone has an overlap with P0440D10 (DDBJ: AP003852) clone at 5' end and with P0463A02 (DDBJ: AP003258) clone at 3' end. Detailed information on overlap and assembly quality together with annotation of this entry is available at http://rgp.dna.affrc.go.jp/GenomeSeq.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /translation='wasskpillgillsittcluoullaaanpopppppscDksdKelr

Submitted (20-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
ON Nov 20, 2002 this sequence version replaced gi:23908408.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold') within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads of the clome and there may be sequence contigs within a scottig-scaffold that consist entirely of whole senome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 * NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 1 contigs between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* 1 143780: contig of 143780 bp in length.

It currently consists of 22 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 19 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Direct Submission

Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 15A, UK. E-mail enquiries: vega@sanger.ac.uk Clone requests: clonerequesteseanger.ac.uk clonerequestes: clonerequesteseanger.ac.uk

On Feb 28, 2002 this sequence version replaced gi:18857781.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, FMEL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.aanger.ac.uk/Projects/C elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chrl

RP5-88207 is from the library RPCI-5 constructed by the group of Pieter de Jong. Por further details see that http://www.chori.org/bacpac/home.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.
(Drosophila), a ribosomal protein S2 (RPS2) pseudogene, the EIF2B3 gene for eukaryotic translation initiation factor 2B subunit 3 gamma 58kDa, a chromosome 14 open reading frame 18 (Cl4Orfil8) pseudogene, a peptidylprolyl isomerase A (cyclophilin A) (PPIA) pseudogene, a mitochondrial ribosomal protein S17 (MRPS17) pseudogene and four CpG islands, complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .17517),

    During sequence assembly data is compared from overlapping clones.
    Where differences are found these are annotated as variations
    together with a note of the overlapping clone name. Note that the
    variation annotation may not be found in the sequence submission
    corresponding to the overlapping clone, as we submit sequences with
    only a small overlap as described above.
    This sequence was finished as follows unless otherwise noted: all
    regions were either double-stranded or sequenced with an alternate
    chemistry or covered by high quality data (i.e., phred quality >=
    30); an attempt was made to resolve all sequencing problems, such
    as compressions and repeats; all regions were covered by at least
    one plasmid subclone or more than one Mi3 subclone; and the
    assembly was confirmed by restriction digest. The following
    abbreviations are used to associate primary accession numbers given
    in the feature table with their source databases: Em; EMBL; Sw;
    SWISSRROT; Tr:, TREMBL; Wp;, WORMPEP; Information on the WORWBEP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a "working draft" sequence. It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

Direct Submission

AL Submitted (19-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 9, 2003 this sequence version replaced gi:22772437.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads.

NOTE: This is a 'working draft' sequence. It currently consists of 5 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Submitted (19-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, IX 77030, USA

NOTE: This is a "working draft' sequence. It currently consists of 6 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole shorgun sequence reads. Both end sequences and whole shorgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Assembly program: Phrapy version 0.990329

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         which the particular read came. The validation rate for these SNPs was estimated at approximately 98*. WGA-discovery (WGA) of Boxer/Poodle SNPs:
A second set of SNPs was generated using a similar methodology except that the contigs from the 1.5x poodle assembly (Kirkness 2003) were used instead of WGS reads. Since this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (German Shepherd, Rottweiler, Bedlington Terrier, Beagle, Labrador
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The WGS reads were placed uniquely on the CanFaml.0 boxer assembly and SNP detection was

```
discarded. After above filtering, NQS (30,25) standard was applied to all pairs of overlapping reads to call NQS bases and SNPs. Alignments (between two reads) with less than 100 NQS bases or with SNP rate > 0.01 were discarded. To exclude alignment between two copies of a single read, comparisons between two reads that share stingle read, comparisons between two reads that share solved a single read, comparisons between two reads that share slignments (>=95% bases of read A and >=95% bases of read B were placed at the same locus of human genome) were discarded.
